Seeking a full-time Quantitative Research role starting in January 2027

Experience

Candriam, Quantitative Research Intern, Systematic Strategies

Paris, France

- Built and backtested a systematic equity portfolio on the point-in-time Russell 1000, combining pairs trading with complementary momentum and reversal strategies
- Developed a machine-learning approach to pair selection, more than doubling the net Sharpe ratio of a classical distance-based benchmark under the same backtesting framework
- Analysed transaction costs and redesigned trading signals to reduce turnover and improve net performance

May 2026 – Nov 2026

Elseware, AI Engineering Consultant via ENSAE Junior Études

Paris, France

- Developed TrustAgent, a multi-agent LLM system that tests operational-risk scenario assumptions set by expert judgement against retrieved public evidence and returns auditable verdicts

Feb 2026 – Aug 2026

École Polytechnique, Research Assistant in NLP — supervised by Prof. Alessandro Riboni

Paris, France

- Quantified individual influence within the FOMC using contextual embeddings
- Applied static embeddings (GloVe, A La Carte) to Congressional speeches to measure political polarization on monetary policy

Jun 2025 – Apr 2026

Siléane, Machine Learning Intern

Saint-Etienne, France

- Benchmarked commercial computer vision platforms (Halcon, Picsellia, Mech-Mind) on client classification, segmentation and detection projects to support the team's decision on whether to build an in-house model

Jun 2024 – Sep 2024

Projects

Candriam, Quantitative Research Project, collaboration with ENSAE

Oct 2025 – Apr 2026

- Benchmarked Loughran–McDonald and FinBERT sentiment scores on the MD&A sections of 67,000+ SEC filings using panel regressions and long-short portfolios, finding no robust predictive signal for 1-21-day abnormal returns
- Built the extraction and parsing pipeline for MD&A sections of 10-K/10-Q filings, with point-in-time alignment on returns and control factors

Qube Research & Technologies (QRT), Data Challenge 2025

Oct 2025

- Ranked 3rd out of 150 participants selected from top French engineering schools (École Polytechnique, ENSAE, Centrale)
- Developed boosting and linear models to predict the next-day performance sign of asset allocations from historical returns, liquidity behavior and turnover features

Education

Master of Science in Statistics, Finance - Institut Polytechnique de Paris

Paris, France

- Coursework:** Stochastic calculus, Dynamic optimization, Risk management

2025 – 2026

ENSAE Paris, Master of Engineering in Statistics, Data Science and Machine Learning

Paris, France

- Coursework:** Statistics, Machine Learning, Stochastic Processes, Time Series

2022 – 2026

Ecole des Mines de Saint-Etienne, Ingénieur Civil des Mines

Saint-Etienne, France

- Coursework:** Big Data, Deep Learning, Game Theory, Micro-Macroeconomics

2022 – 2026

Skills

Programming: Python (pandas, numpy, scikit-learn, statsmodels), SQL, C, R, Git

Languages: French (Native), English (C1 - 940 TOEIC), Spanish (B2)

Extracurricular Activities

Awarded the **Louis Neltner Excellence Scholarship** (2022) and the **EDF – Institut de France Scholarship** (2023)

Founder of the **Mines Saint-Étienne Finance Association** (2023)

Member of the **rugby team** of Mines Saint-Étienne (MORSE) and later ENSAE (TARC)
